

The core of a matter is discovered by

CORESCOPE

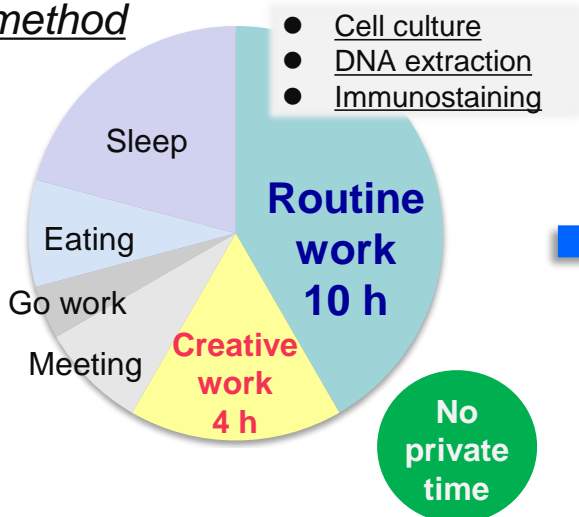

For the better quality of life

The graph shows an example of one day schedule of a busy researcher on regenerative medicine. Routine work occupy a very big part. Cell culture, DNA extraction and Immunostaining, a lot of time is spent on routine work. And, unfortunately, he has no private time. In the field of regenerative medicine, our mission is improvement of quality of life of researchers. **CORESCOPE products will decrease the time of routine work** by increase work efficiency and reduce simple mistakes. As a result, researcher can get a lot of time for really important work, and get a private time to spend with family or friends. Improvement of quality of life of researchers will lead to better research results for cure of disease.

Conventional method

CORESCOPE method
